What is CSS Grid ?

A grid is a collection of horizontal and vertical lines creating a pattern against which we can line up our design elements layouts in which our elements won't jump around or change width as we move from page to page, providing greater control.

- CSS Grid Layout is a two-dimensional layout system for the web.
- It lets you lay content out in rows and columns.
- It has many features that make building complex layouts straightforward.
- A grid will typically have columns, rows, and then gaps between each row and column. commonly referred to as gutters.
